

GDES NEWS UPDATE

KDS 120 Mud Treatment System Delivered To Australia

In May 2023, GDES as Kosun agent, delivered it's first KDS120 system to a customer in Queensland. The project involved regular visits to the factory floor by GDES manufacturing engineer Jade Lee. Having Jade on the ground throughout the project was essential and enabled us to provide regular progress updates, along with supportive material to our customer throughout the process. Ongoing manufacturing and quality monitoring is essential in building these large systems, which once completed are partially disassembled for shipment. Parts and assemblies need to be carefully labeled and packaged in such a way that re assembly on location is straight forward.

In addition to documentation, our team also compiled a detailed operational training video, thus enabling the customer to self commission the unit.

Safety Guards and compliance monitoring throughout the build. This picture shows part of the assembly before being painted in customers of choice colour.

Manufacturing Time

The project took approximately 75 days to complete at the Kosun factory in Xian China, followed by five weeks shipping time to the port of Brisbane.

Contact us if you would like information on our complete range of Mud Treatment systems, or if you require a tailored solution to meet your requirements.
